### Experience

Senior Business Analyst Db Schenker | San Jose , CA 01/2017 - 05/2018

- Worked in Managed Investments Domain.
- Onboarding new Clients (Conversion) to the Pershing platform & de-converting the existing clients, if required.
- Meet with the clients; gather requirements, timelines, and documents.
- Perform gap analysis to identify the different systems involved in the project and discuss options with the clients.
- Clients discussion to fix the constraints in the data mapping process and ensuring the integrity of the data.
- Building the project execution plan, conversion calendar & run book/roadmap with the detailed activities to client.
- Document the code changes required to accommodate the conversion, review with the management, and pass it on to the development teams.
- Build test cases for various business scenarios and test the code changes.
- Receive client files, validate them by loading them to the SQL server database.
- Build queries to manipulate the client data and convert them into the required data format to use in the standard conversion tools.
- Complex query validations, fine-tuning the query to improve the performance.
- Address the data issues/bugs and present the conversion metrics to the clients.
- Documenting and maintaining the process backlogs and prioritizing the solutions.
- Provide Post Conversion support.
- Collaborate with cross-functional teams in identifying the opportunities for operational improvements made for automating the manual processes involved in conversion activities.
- Added new features to the ETL tool (created for automating the manual conversion activities to save the execution time and avoiding manual errors during project execution) like generating different files according to the systems involved where the data are updated, file format conversion, etc.
- Develop and execute User Acceptance Testing (UAT) case scenarios for the ETL tool enhancements.

Senior Application Developer Kemper Corp. | Louisville , KY 01/2014 - 12/2016
