- Involved in MuleSoft Introduction Project to implement MuleSoft as a strategic service to integrate cloud and on-premise applications
- Implemented several cloud based integration projects including Salesforce, Ariba and GEP
- Worked directly with various vendors to implement new functionalities and enhance integration platforms

02/2011 to 12/2011

Senior WebMethods Consultant Gavilon LLC 1/4 City , STATE

- The information sent from multiple commodity trading systems is created in Oracle R12 EBS using the webMethods Oracle APPS adapter.
- We used the Oracle Public API's to create Supplier, Customer and Bank Account Information in accordance with Trading Community Architecture.
- The data retrieved is mapped to the records in the Oracle Apps Server and the API to create the Supplier, Customer or Bank Account is invoked.

- The Oracle Public API's are wrapped in custom PL/SQL packages. The custom stored procedures are invoked by defining an Oracle to IS transaction in webMethods Oracle APPS adapter administration page. These transactions are used to create the webMethods Adapter services.

03/2010 to 01/2011

WebMethods Consultant Life Technologies i¼ City , STATE

- The project involved XML integration between Life technologies and Kenexa Recruiter Brass Ring(KRB) for hiring
- Life technologies send the job description, department, location, employee data(managers and recruiters) to Kenexa. The data comes from SAP to webMethods through RFC.
- The data is transformed into Kenexa XML tags and sent by HTTPS.
- Kenexa evaluates these candidate resumes with job description, requirements and selects suitable candidate profile which is later sent to Life technologies.

08/2009 to 02/2010

Webmethods Consultant Dish Network i¼ City , STATE

- Worked on several EDI integrations between Trading partners and internal systems.
- Used EDI X12 and EDIFACT standards

06/2008 to 06/2009

Java & WebMethods Consultant Spartan Stores i¼ City , STATE

- Worked on integrating existing partners and new partners, data synchronization between legacy DB2 systems and Oracle applications.
