

## FREELANCE TEST

### Professional Summary

Austin, TX Software Quality Assurance Engineer

I have experience in the area of Software Quality Assurance with hands on experience in software testing at all levels of STLC.

I have extensive experience in system testing, functional and regression testing with black box and gray box methodologies.

I've been working with client-server application testing and data quality testing in relational databases. I have good experience in writing SQL queries for data analysis and testing.

I was working in Agile environment.

Capable of delivering optimized, effective and well-documented system level test cases, test plan, test results and reports, have worked in high pressure environments adhering to product quality.

Dynamic team player, a self-starter with good communication and leadership skill.

Ability to handle multiple tasks and work independently as well as in a team environment.
