ANDROID DEVELOPER

Profile

A forward thinking developer offering more than two years of experience building, integrating, testing and supporting Android applications for mobile and tablet devices on the Android platform. I have a strong allegiance to agile and test-driven development practices, methodologies like Scrum and Kanban and an eye for detail and quality. Also, I very much am a communicator and team player who understands what is required to build and deliver household name services.You will be expected to take responsibility for the technical direction and delivery of Mobile Platforms projects, enabling us to meet its business requirements. Develop, test, release and document applications using best software engineering practices to ensure timely service delivery and ease of maintenance. Assist the Operations team with service launches by providing timely adoption documentation, training and assistance with problem resolution. Provide technical advice to the editorial and design teams on new application concepts and to establish their feasibility through prototypes. Develop tools and methodologies to improve the effectiveness of the development process and collaborate effectively with other technical teams to exploit new technologies to enhance the applications and service infrastructure. Keep abreast of developments in software engineering and technologies particularly related to Mobile devices, review the work of other team members and to provide assistance as directed. and assist with training of new team members and trainees as required.
